

## **Acknowledgements**

Many people contributed towards making this book a reality. The modeling chapters of this book are based on ozone concentration data collected in the Sierra Nevada in summer 1999. That was a collective effort of the numerous USDA Forest Service personnel both from the National Forest Systems and Research & Management branches. Thanks go to Trent Procter and Bill Lyons for coordinating those efforts and to Peter Adams, Nancy Barrera, Nick Beran, Donna Bertolina, Mary Bingen, David Cooper, Ron Cummings, Pat Dauwalder, Denise Frey, Dionne Gruver, Laura Harper, John Hicks, Jeff Hilson, Ricki Kartes, Karen Kessler, Diane Lacy, Bill Mathews, Brian Montgomery, Jennifer Padgett, Richard Perloff, Mike Price, Wendy Russ, Bobby Self, Soai Talbot, Nicole Tancreto, Greg Treber, and Katy Warner for excellent help with selection of monitoring sites and timely and careful exchanges of the samplers. Thanks to their help this book could be accomplished.

We thank chapter reviewers: Mark Fenn, D.W. Byun, Dan Duriscoe, Lisa Emberson, Peter Finkelstein, David Grantz, Nancy Grulke, Peter Guttorp, David Holland, Kevin Johnston, Danny Lee, Jim Laacke, Joe McBride, Tom Meixner, Sylvia Mori, Robert Musselman, Ned Nikolov, John Pronos, John Ray, Dennis Robin, Douglas Shadwick, Patrick Temple, Juha-Pekka Tuovinen and the ESRI reviewer. Their willingness to help the editors to assure the peer-reviewing process of materials contained in this volume is greatly appreciated. Critical, fair and constructive remarks provided by these individuals greatly helped the authors to improve quality of their chapters.

We extend our thanks to Professor Sagar V. Krupa, editor of the Elsevier series "Developments in Environmental Sciences" for his continuous support and patience with the editors and authors during the production of this book.
