

E-WASTE

PLEASE   RECYCLE

WHAT IS E-WASTE ?

E-waste" is a broken, non-working or old/obsolete electric electronic appliance such as TV, PC, air conditioner, washing machine and refrigerator. "Household E-waste" means e-waste that comes from household, commercial, institutional.

E-WASTE IMPACT ON HUMAN HEALTH AND ENVIRONMENT

E-waste is filled with a veritable of toxic materials that affects human & animal body and environment. When this e-waste is not properly handled and simply thrown out with the garbage, ultimately ending up in landfill, it means both human health and the environment are at risk. E-waste is filled with a veritable of toxic materials that affects human & animal body and environment.

WHY DOES IT MATTER ?

E-waste is becoming a global issue because of tremendous growth of demands on electrical and electronic equipment and the disposal after use. Disposed E-waste sometimes cause health and environmental hazard if they are not handled properly.

E-WASTE IS A RESOURCE !

Electronic waste contains a various type of metals and materials which can be recycled.

Taking TV (CRT) for example, it contains copper, iron, glass and plastic in its body, and over 75% of the body can be recovered to be used as raw materials.
